Project title- Mission Dharitri

Let's Rise for Our Mother Earth

MISSION DHARITRI JAGRAN

About:-

- In this project, I am working with an organization named **"The Environmentalist"**. Their goal is to make the mother earth clean and livable.
- For this purpose, they come up with environmental campaign every year.
- This year they focus on the climate change awareness programme.
- The name of the campaign is **"Mission Dharitri"** the tagline of the mission is "Let's rise for the mother earth".

Note:- "The project name, organization, and theme" are all imaginary names, and made for academic purposes only.

Budgetry allocation

Total Budget- 30 lakhs

(1.) Digital marketing- 6,00,000

- (i.) 2 lakhs will be allocated for social media posts and ads,
- (ii.) 1.25 lakhs on Google ads, email marketing and SEO
- (iii.) 1 Lakhs on influencers collaboration
- (iv.) 1.75 lakhs on content creation

Target from this- To reach 5-10 million users, drive traffic on the website.

Budgetry allocation

Total Budget- 30 lakhs

(2.) Content production- 4,00,000.

(i.) 2 lakhs on campaign video production, photography, copywriting and creative strategy

(ii.) 2 lakhs on post production and editing

Goal - High quality storytelling to emotionally engage audience.

Budgetary allocation

Total Budget- 30 lakhs

(3.) On ground activations- 10,00,000.

- (i.) 2 lakhs on plantation drives
- (ii.) 1 lakh on awareness event
- (iii.) 5 lakhs on rebuilding flood-hit villages.
- (iv.) 1 lakh on college and school events
- (v.) 1 lakh on volunteer kits

Goal - Direct engagement with the community and credibility from all the stakeholders.

Budgetary allocation

Total Budget- 30 lakhs

(4.) partnerships and PR - 2 lakhs

- (i.) 0.5 lakhs on NGO partnerships and collaborations
- (ii.) 1 lakhs on media coverage and PR campaigns
- (iii.) 0.5 lakhs on press release

Goal - Build trust and authority

Budgetary allocation

Total Budget- 30 lakhs

(5.) Monitoring, Analytics and Research - 2 lakhs

- (i.) 0.75 lakhs on data tracking tools
- (ii.) 0.75 lakhs on impact measurement tools
- (iii.) 0.5 lakhs on surveys and feedback

Goal - Measure RoI and optimize campaign

Budgetary allocation

Total Budget- 30 lakhs

(6.) Team operations - 4 lakhs

- (i.) 2 lakhs on campaign manager and team salary
- (ii.) 2 lakhs on logistics and coordination

Goal - Smooth execution of the campaign.

(7.) Contingency fund- 2 lakh

- (i.) Emergency expenses
- (ii.) Crisis management

Theme Rationale

In the modern era, climate change is the biggest threat to humankind. The climate change poses various challenges like sea level rise, floods, erratic rainfall, the spread of disease etc. Every year Our NGO “The Environmentalist” runs its campaign to tackle the detrimental effect of climate change, and this year our theme is “**Mission Dharitri**”. The theme **Dharitri Jagran (Awakening for Mother Earth)** reflects the urgent need for collective consciousness and responsible action. The tagline “**Let’s rise for our Mother Earth**” calls for people’s participation, community engagement, and leadership-driven action. It shifts the focus from fear to empowerment, and the purpose is to encourage individuals to adopt sustainable lifestyles, promote environmental education, and support climate-friendly policies. The theme aligns with the vision to build a safer, greener and environmentally sensitive society where development and environmental protection go hand in hand. By awakening minds and inspiring action, *Mission Dharitri Jagran* aims to create a people-led movement for climate justice and sustainable progress.

CAMPAIGN VISION:-

To raise public awareness and the detrimental effect of climate change on our life, and to promote sustainable developmental practices in lifestyle. The campaign aims to build a sustainable future by fostering environmental consciousness, promoting climate-responsible behaviour, and mobilizing citizens across all sections of society to actively participate in protecting the planet for future generations.

CAMPAIGN'S OBJECTIVES:-

To promote climate awareness through an integrated communication strategy that combines grassroots outreach, Panchayat involvement, community participation, mass media, and social media engagement to reach diverse populations, encourage sustainable practices, mobilize youth and rural communities, and build collective responsibility toward protecting the environment and ensuring a livable planet for future generations.

SWOT ANALYSIS

Strength-

- Very Relevant in the modern context.
- Various empirical and scientific evidence support.
- International community support.
- Growing youth engagement and social media activism.
- Increased attention from Judiciary.

Weakness-

- It is a complex and technical issue for common people, and not immediate bread and butter issue.
- Behavioural change is slow and steady.
- Limited awareness among the masses, especially in rural and tier 3 cities.
- Requires long-term commitment and policy support.
- Lack of support from the Global North

Opportunity-

- Global attention through media, International organizations, International agreements, and NGOs.
- Rising curiosity among youths.
- Use of digital media and social networking sites for raising questions and increasing awareness.
- Collaborations with NGOs, educational institutions, government, Corporates, and cooperate societies.
- Mobilize communities for sustainable practices.

Threat-

- Climate misinformation, and denial.
- Challenges from capitalism and development v.s. environmental sustainability narrative.
- Political and profit interests resisting environmental reforms.
- Public fatigue towards environmental reforms.
- Lack of adequate funding , and poor performance by International organizations and groupings.
- Global uncertainty and geopolitical tussels in recent years, lack of cooperation.

IMPORTANT CONSIDERATIONS

We need to carefully analyze all the elements and complexities identified in this SWOT analysis. Through proper research, people's participation, grassroots level awareness, and sensitization of global communities and populations, we can tackle this challenge and make our planet livable for future generations.

An integrated communication strategy is essential to effectively reach the masses. Choosing the appropriate medium of communication is crucial. For example, rural populations can be better engaged through the involvement of Panchayats in the campaign, the use of community radio, and direct communication through volunteers. Similarly, youth can be targeted through social media campaigns and digital platforms.

Making people realize the importance of environmental protection and sustainability is the most fundamental step. ***Mission Dharitri*** is designed in such a way that it aims to achieve this objective by encouraging awareness, participation, and collective responsibility toward the planet.

Climate change studies

- India ranked 9th most affected country in climate risk index.
- Himalayan glaciers are melting 2 times faster today than they did in the late 20th century.
- Due to climate change up to 45 million people may be forced to migrate by 2050.
- India will face a 50% water deficit by 2030, mainly because of climate change.
- An increase of 1–2 °C in temperature is going to have a significant negative impact on the yield of major food crops in low-altitude countries like India
- Fatalities from extreme weather rose by nearly 50% between 2021 and 2025. Also, an increase in natural disasters and vector borne diseases is posed by climate change.

Key Takeaways from Climate Change Studies

- India is highly vulnerable to climate change due to geographic diversity, poverty, gender disparity, dense population and 86% small and marginal farmer population.
- Rapid Himalayan glacier melt threatens long-term water security in northern basins, increased flash floods, landslides and other disasters.
- A projected 50% water deficit by 2030 underscores the water crisis and need for sustainable water management.
- Climate-induced migration may strain urban infrastructure and regional stability. It may also have bad consequences on air quality of the cities. Along with this, more conflicts for resources, xenophobia, ethnic, language, and cultural conflicts.
- Rise in temperature could affect crop yield, which can cause food insecurity (Particularly among vulnerable groups like the poor, children, and women), and worsen the already worsened nutrition deficiency crisis.
- Increasing extreme weather and vector-borne diseases highlight impacts on health, economy and disaster systems.
- It will cause huge economic cost, decreased labour productivity, mental health issues etc.

Analysis of the data

- The research data indicates that youth can play a huge role in making this campaign successful, so the campaign must take care of youth in the whole process so that they feel more connected to the campaign.
- Primary level students are important in driving the campaign, but leadership must come from Universities. They can help expand the campaign's reach. Secondary level students must be involved in the campaign as volunteers and become future leaders. Strategies like climate related quiz, sustainability programmes, seminars, and certification will be a great tool to make the campaign successful.
- Women's role becomes very important in this campaign. From planning to execution, they must be at the forefront. Women can be a driving force in making the campaign successful and provide genuine leadership at the grassroots level. They are also very important for making long term impact.

Environment sensitivity demographic data

Age based

Youth are likely to be the largest drivers of environmental movements.

Gender based

Women-led participation can significantly enhance the effectiveness of the mission.

Education based

Universities can become centres of environmental activism

Rural v.s Urban v.s. semi urban

Urban and rural audiences are more curious about environmental protection, and can be a game changer in the movement

Target Audience Segmentation

Understanding our target audience is critical for effective communication. We will focus on key segments, including environmentally conscious consumers, businesses committed to sustainability, educational institutions, and policymakers, enabling tailored messaging and engagement strategies that resonate with each group. For each group we will create a persona, and after analyzing their persona we will create the campaign accordingly.

Target Audience Segmentation

Communication Objective

Awareness and education

Increase awareness about the environmental destruction to the urban and rural youth (18-20) Years by 40% within 4 months. Also, to educate about sustainable lifestyle to people of 30-60 years and target is 20% in 4 months through social media posts.

Action stage

Motivate 10,000 people to take at least one climate friendly action such as tree plantation, waste segregation, energy use saving) during the campaign period. Along with this encourage 500 youths to run similar climate friendly initiatives in their community and locality.

Attitude change objective

Encourage at least 50% of the people (who we targeted in the first stage) to adopt a positive attitude towards sustainable practices such as reducing the use of private vehicles, usage of recycled products, reducing plastic use, and saving energy within 4 months.

Engagement objective

Achieve 100,000 online engagements, 50,000 inquiry clicks through our digital campaign and storytelling.

Integrated Strategy

In our integrated communication strategy, we will engage our target audience through multiple communication channels. Our content will be tailored based on the audience's platform preferences and the type of content they actively consume. The key platforms we will utilize to promote our campaign are:

- 1.Social Media
- 2.Newspaper
- 3.Email
- 4.Blog Posts
- 5.Press Releases

Due to budget constraints and the relatively low return on investment from television advertising, we will not prioritize TV or radio as part of our communication strategy.

Simulated CSR Initiatives

Objective

The primary objective of this CSR initiative is to promote our campaign, Mission Dharitri, and effectively communicate its vision and goals to the public. The campaign aims to position itself as a transformative effort in tackling climate change by driving awareness, encouraging sustainable practices, and fostering community participation.

A key focus of this initiative is to educate and sensitize people about climate change, its impacts, and the urgent need for collective action. Through various programs and outreach activities, we seek to inspire individuals, especially the younger generation to adopt environmentally responsible behaviors and contribute actively toward a sustainable future.

By integrating awareness, action, and community engagement, Mission Dharitri aspires to become a game changer in addressing climate challenges and building a greener, more resilient society.

Simulated CSR Initiatives

Social impact

The CSR initiative under Mission Dharitri is designed to create meaningful social impact by focusing on both awareness and action. It emphasizes educating the younger generation and children about climate change, sustainability, and responsible environmental behavior, thereby shaping future citizens who are more conscious and proactive.

In addition, the initiative aims to support disaster-affected communities by helping them rebuild their lives and regain stability. Through rehabilitation efforts, we seek to restore not only infrastructure but also hope and dignity among affected populations.

Tree plantation drives will play a crucial role in mitigating the effects of global warming. Increasing green cover helps improve soil strength and enhances the resilience of ecosystems against natural disasters such as floods, soil erosion, landslides, rockfalls, slumps, and avalanches.

Overall, this initiative combines education, environmental action, and community support to build a more sustainable and resilient society

Simulated CSR Initiatives

Environmental Awareness programme

We will launch community-driven programs focused on educating citizens about sustainability and reducing their carbon footprint. Through workshops, digital campaigns, and local outreach, we aim to encourage responsible consumption, waste management, and eco-friendly habits. As part of our environmental commitment, we will organize on-ground clean-up drives in ecologically sensitive areas such as the Himalayan regions and coastal beaches across India. Our teams will actively collect plastic waste, promote waste segregation, and raise awareness about the harmful impact of pollution on natural ecosystems.

This initiative will not only contribute to environmental conservation but also inspire communities to take collective responsibility for maintaining a cleaner and greener India

Eco-Education & Awareness Program

We will provide free online environmental training programs for students, aimed at building awareness about sustainability, climate change, and responsible environmental practices. Participants will receive certifications upon successful completion of the training, encouraging learning and recognition.

In addition, we will organize quiz competitions in schools to promote interactive learning and deepen students' understanding of environmental issues. Winners and participants will be awarded certificates, along with cash prizes, to motivate active participation and engagement.

Through this initiative, we aim to educate and empower the younger generation to become responsible citizens and active contributors toward environmental conservation.

Corporate Event Planning

Objectives

The purpose of the event is to officially launch Mission Dharitri and raise awareness about climate change. The event will highlight the campaign's objectives, including sustainability education, environmental conservation (tree plantation and clean-up drives), and support for disaster-affected communities.

Venue

Hybrid, both virtual as well as physical seminar. Main venue would be universities, colleges, and primary sschools in both rural and urban areas. Also, in malls and downtown areas interactive sessions will be held.

Timeline

For universities, colleges and Schools- On working days, so that they could interact with more and more students and their parents. Downtown and malls- Weekends, so that more crowd can be interacted.

Corporate Event Planning

Programme Flow

- (1.)Opening ceremony by introducing people about ***Mission Dharitri*** and about ***The Environmentalist***, and thanking to our sponsors and involved members and participants.
- (2.) Expert talk on climate change and sustainability, PPT presentations showing the disastrous impact of climate change and resilience practices.
- (3.) Student engagement section (Quizzes, knowledge test, speeches, and interaction sessions)
- (4.) Closing note with call to action and joining the mission.

Logistic planning

Budgeting- Spend less on decoration and less important things, and more on quality experts, quizzes, prizes, and influencers.

Items required- Banners, pamphlets, Certificates for quizzes, and eco-friendly kits.

Media coverage- Invite local media persons and news channels.

Promotional strategy

Before event- Social media teasers and countdown posts

Email invitations to students, NGOs, and stakeholders.

Press announcements in newspapers and online portals.

After event- Share highlights (photos, videos, testimonials)

Publish blog posts and press coverage.

Post impact summary (participants, engagement, pledges)

Media Engagement Strategies

Social Media

Leverage platforms like Instagram and Twitter to create awareness and promote campaign messages effectively.

Press Releases

Distribute targeted press releases to major outlets, highlighting key campaign milestones and engagement opportunities.

Influencer Partnerships

Collaborate with eco-influencers to amplify messaging and reach broader audiences across various platforms.

Community Events

Organize local events to engage the community, fostering direct interaction and promoting climate change awareness.

Creative Properties Overview

Print Ads

Creative print advertisements will convey our message through visuals, engaging copy, and strong branding elements.

Outdoor Ads

Strategic outdoor advertising placements will maximize visibility and reach, promoting awareness of climate change initiatives.

Radio Jingle

A catchy radio jingle will deliver our campaign's core message, encouraging listeners to take action against climate change.

Video Ad

A compelling video advertisement will highlight the urgency of climate change, showcasing solutions and inspiring community involvement.

Digital Media

Engaging web banners, social media posts, and email campaigns will reinforce our messaging and increase audience engagement online.

Print Advertisements

Effective Climate Messaging

Engaging print ads are essential to communicate the urgency of climate change effectively.

Print advertisement is given in the next slide

 The Environmentalist

Web page banner

Billboard Advertisement

Video Advertisement

Video advertisement link

The video ad will creatively showcase **climate action**, inspiring viewers to participate in sustainable initiatives.

Web Banner Design

This is the landing page, people who click on our link would directly land on this page. Here, information about the campaign, how to join it, and the deprivation and detrimental effects of climate change is provided. One can give donations through the **Support the campaign** tab, the theme of the campaign, and the poster of the campaign, which is also provided to make it visually attractive.

Press Release

Press Release: Mission Dharitri

Mission Dharitri is a people-driven campaign aimed at raising awareness about climate change and inspiring collective action. It focuses on simple, practical steps that individuals, communities, and institutions can take to protect the environment.

The campaign connects emotionally with people by highlighting the urgency of the climate crisis and the need to act now. Through school and college outreach, public events, and digital platforms, Mission Dharitri encourages participation from all sections of society.

Key initiatives include tree plantation drives, environmental education for youth, and support for communities affected by natural disasters. The campaign also promotes sustainable habits that can be adopted in daily life. Mission Dharitri is not just a campaign, it is a movement for a greener, safer future. Everyone is invited to join and contribute towards building a resilient and environmentally conscious India.

Newspaper Coverage

To promote the campaign, I chose newspapers as a communication medium. Instead of using a direct advertisement, I preferred presenting the campaign in a story format, as it appears more authentic and credible to readers. This approach helps the campaign look like a genuine news development rather than promotional content.

The story highlights that Mission Dharitri Jagran aligns with the government's climate commitments and can support policymakers, lawmakers, and the executive in addressing environmental challenges.

I selected the Science and Technology page because it is commonly read by individuals who are interested in environmental issues, innovation, and climate-related developments. Such readers are more likely to engage with the topic and spread awareness.

Additionally, I chose an English-language newspaper because its readership often consists of influential and opinion-forming individuals. These readers have the potential to influence a large number of people and can help amplify the impact of the campaign.

EDM Plan

MOTHER EARTH IS CALLING YOU, JOIN MISSION DHARITRI AND BECOME THE ULTIMATE WARRIOR IN THIS WAR AGAINST CLIMATE CHANGE

DHARITRI JAGRAN

Email Marketing Strategy

I am using a simple email format because my target audience belongs to all sections of society, so it can be easily understood by everyone.

This campaign is designed to emotionally engage the audience by highlighting the urgency of climate change and positioning Mission Dharitri as a movement.

This email contains simple visuals and conveys a sense of urgency, so that people who receive the email are encouraged to click on the link and land on our homepage. I have also provided social media links, so that recipients can directly visit our social media pages.

Along with this, I have included an unsubscribe option to follow the ethical guidelines of email marketing.

Blog Content

Blog Content

Climate change is one of the biggest threats to the planet, and many scholars suggest that it could be the primary cause of the sixth mass extinction. Today, global temperatures are rising at a rapid pace, and many reports suggest that we are getting closer to the 2°C threshold by the 2030s or 2040s. Hence, the danger posed by climate change is becoming more severe with each passing day.

People often misinterpret climate change as merely rising global temperatures, but it has a profound domino effect. It can be best understood by the fact that climate change leads to uneven and erratic rainfall (recent rainfall and hailstorms in Delhi in the month of March are a perfect example of this). This leads to crop failure; crop failure results in rising inflation, which in turn leads to undernutrition. It further contributes to an increasing disease burden, loss of working hours, and economic decline, and all of this can ultimately give rise to civil war-like situations. Similarly, it leads to rising sea levels, increasing sea temperatures, extinction of various species, and wreaks havoc on the planet.

To tackle this, we need an approach that is aligned with sustainability. For this, we must make our communities aware of the detrimental effects of climate change, encourage climate-friendly lifestyles, use energy-efficient equipment, and promote eco-friendly buildings and materials.

To address this challenge, The Environmentalists have launched Mission Dharitri to make citizens aware of the adverse effects of climate change and the ways to tackle this pressing issue. The theme of the campaign is “Let’s Rise for Mother Earth,” which signifies a collective awakening to remove the predicaments of our planet.

In this mission, our group will conduct awareness drives in schools, colleges, and universities, and will also organize quizzes and debate programmes. Participants will receive certificates, and the top three candidates will be rewarded with cash prizes.

As part of this mission, we will also run a plantation drive and are planning to plant 20,000 trees in selected areas. Additionally, we will help rebuild houses in villages affected by climate disasters.

If you are a climate-conscious citizen and want to help Mother Earth heal, then join our campaign by visiting our website. You can also support us through our social media channels on YouTube, Facebook, Instagram, and LinkedIn. We have taken a lot from our Mother Earth; now it is our turn to return what we owe. Come and join us, we will make it happen together.

Thank you for your support!
